

Welcome

Grenfell Drive Bridge Rehabilitation

Purpose of today's public update meeting:
To provide an update on the project and share information about
upcoming construction

How to engage:

- Review the information boards and drawings
- Ask questions and provide feedback to the project team

Visit the website to learn more:

Project Overview

Grenfell Drive Bridge

- Constructed in 1979
- Rehabilitated in 1990
- A bridge condition survey (2025) identified signs of advanced deterioration

Where we're at:

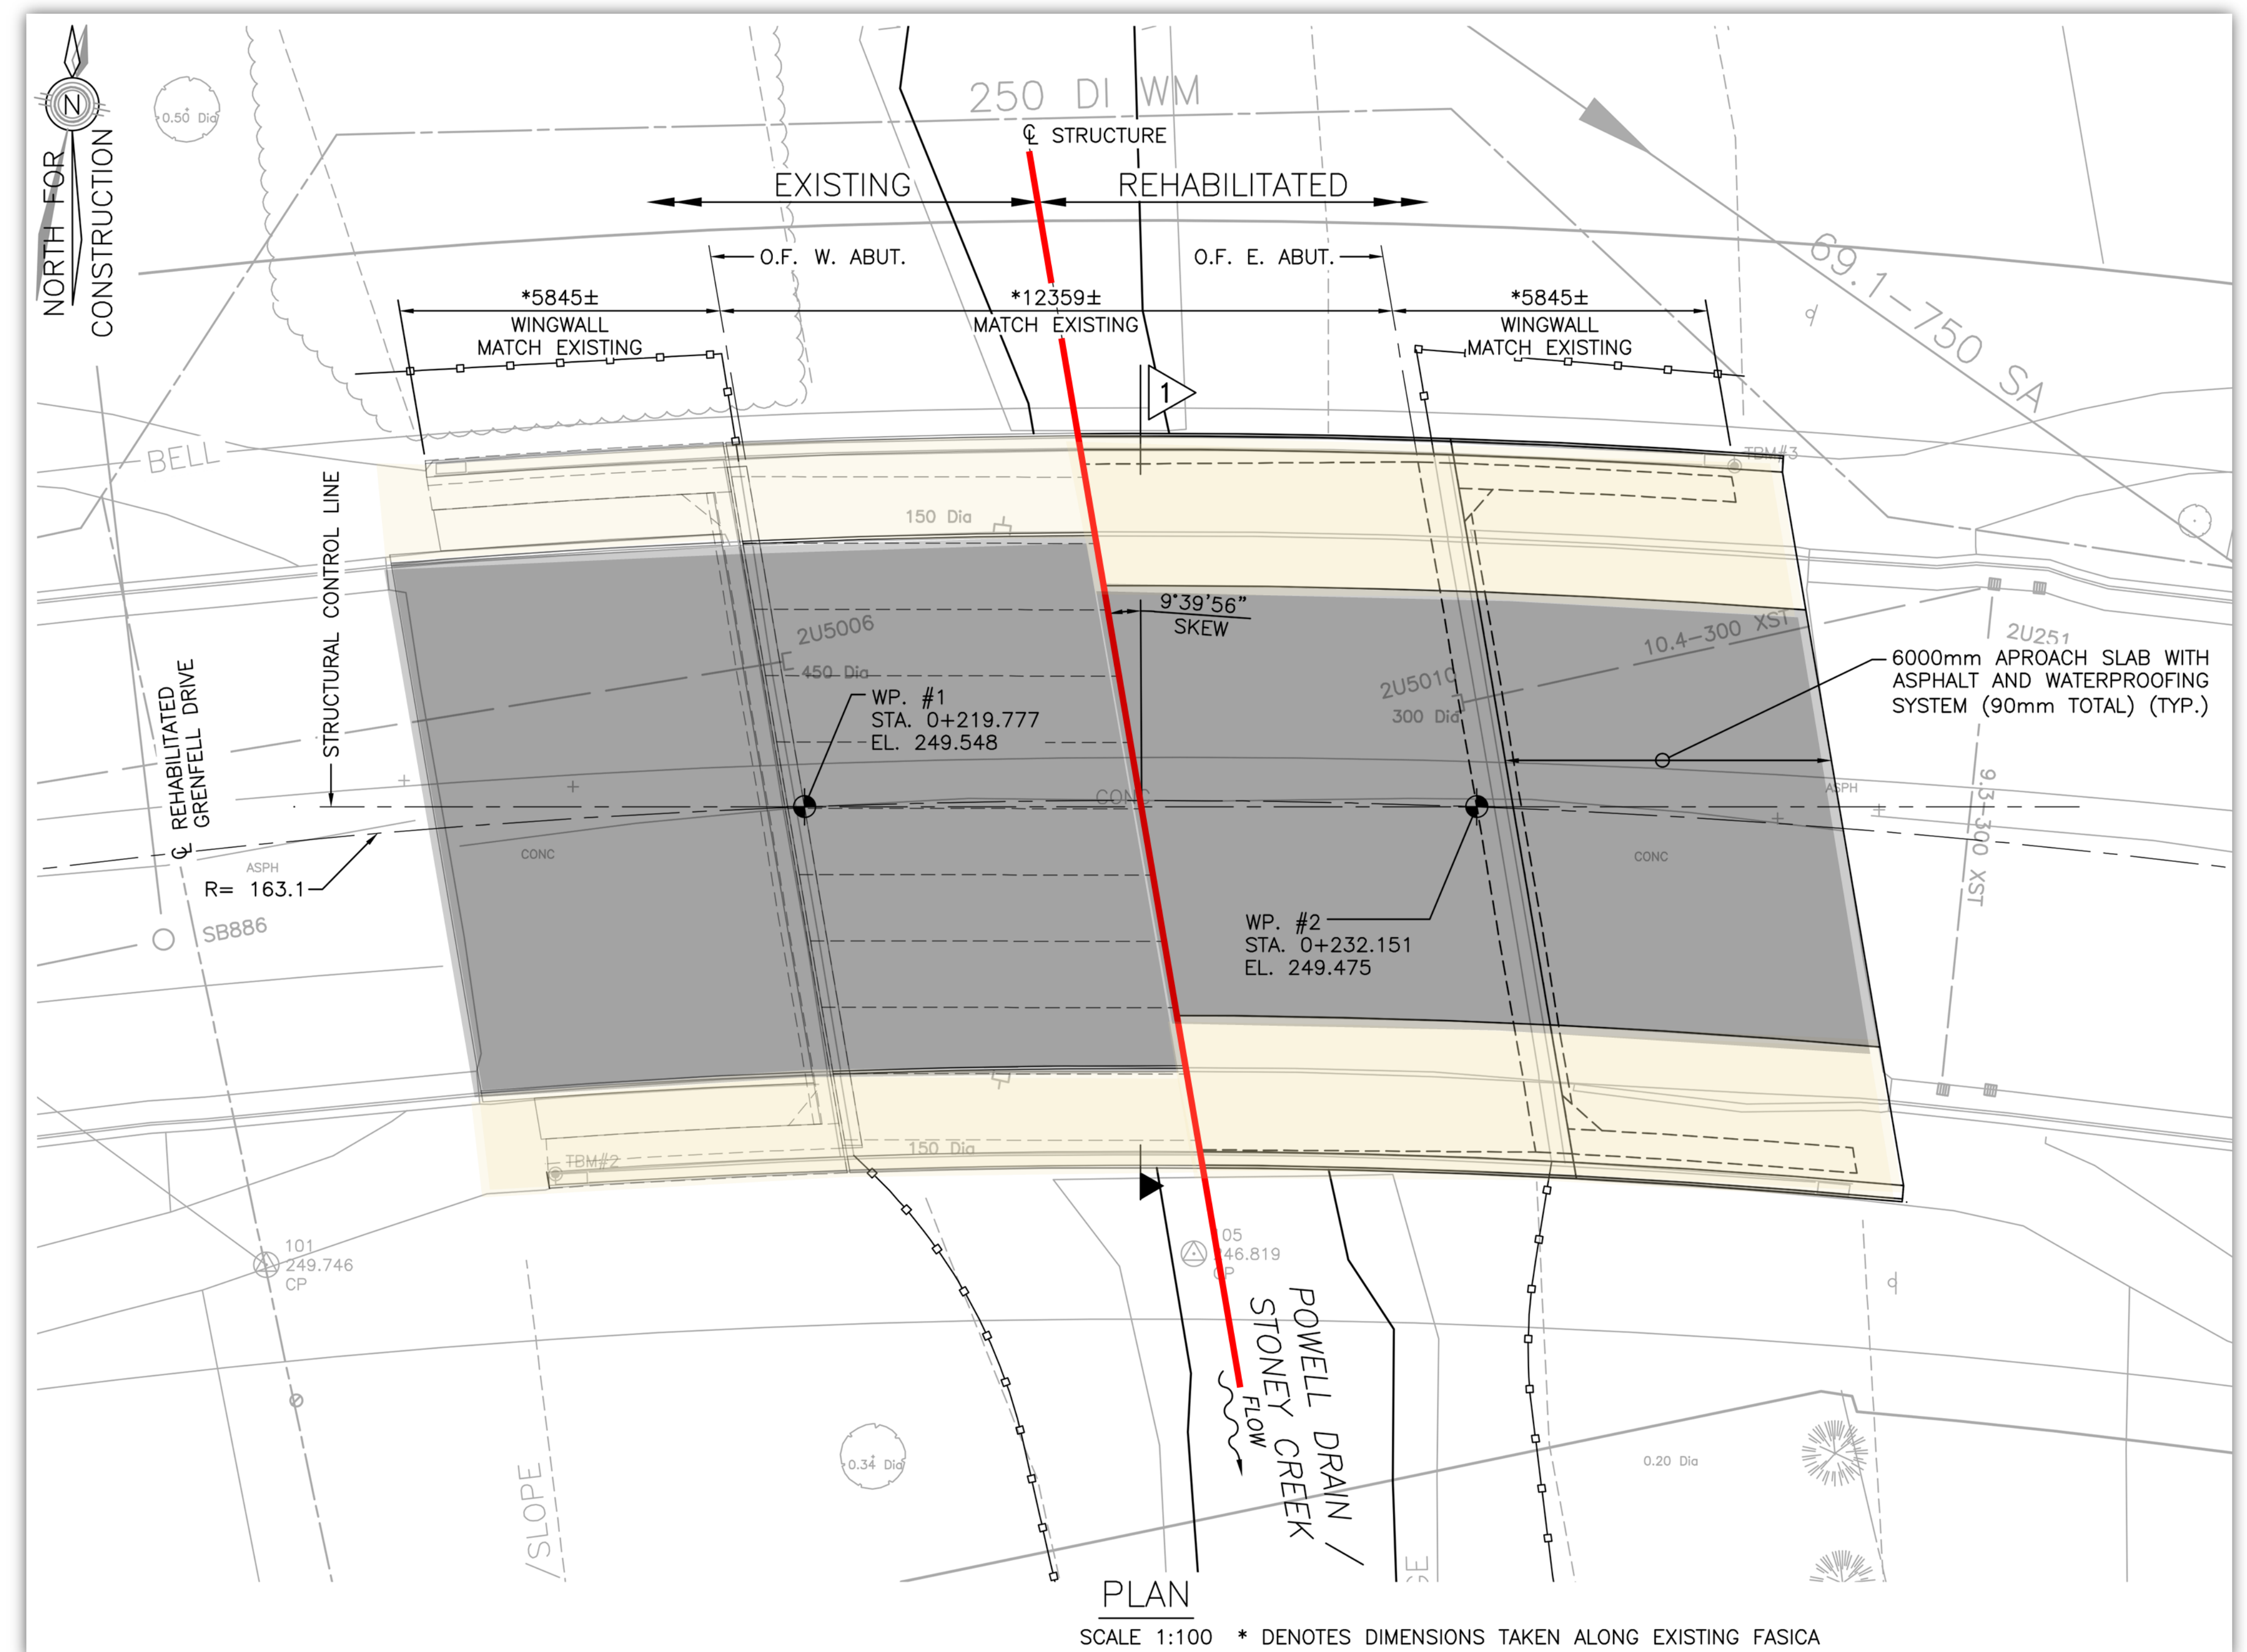

- We are preparing for construction to rehabilitate the Grenfell Drive Bridge
- Your comments will help us identify concerns regarding our traffic management and detour plans

We need your help with:

- What do you like about the design and traffic management plans?
- Are there any issues from your perspective? How can we address these?
- Other ideas, concerns or questions

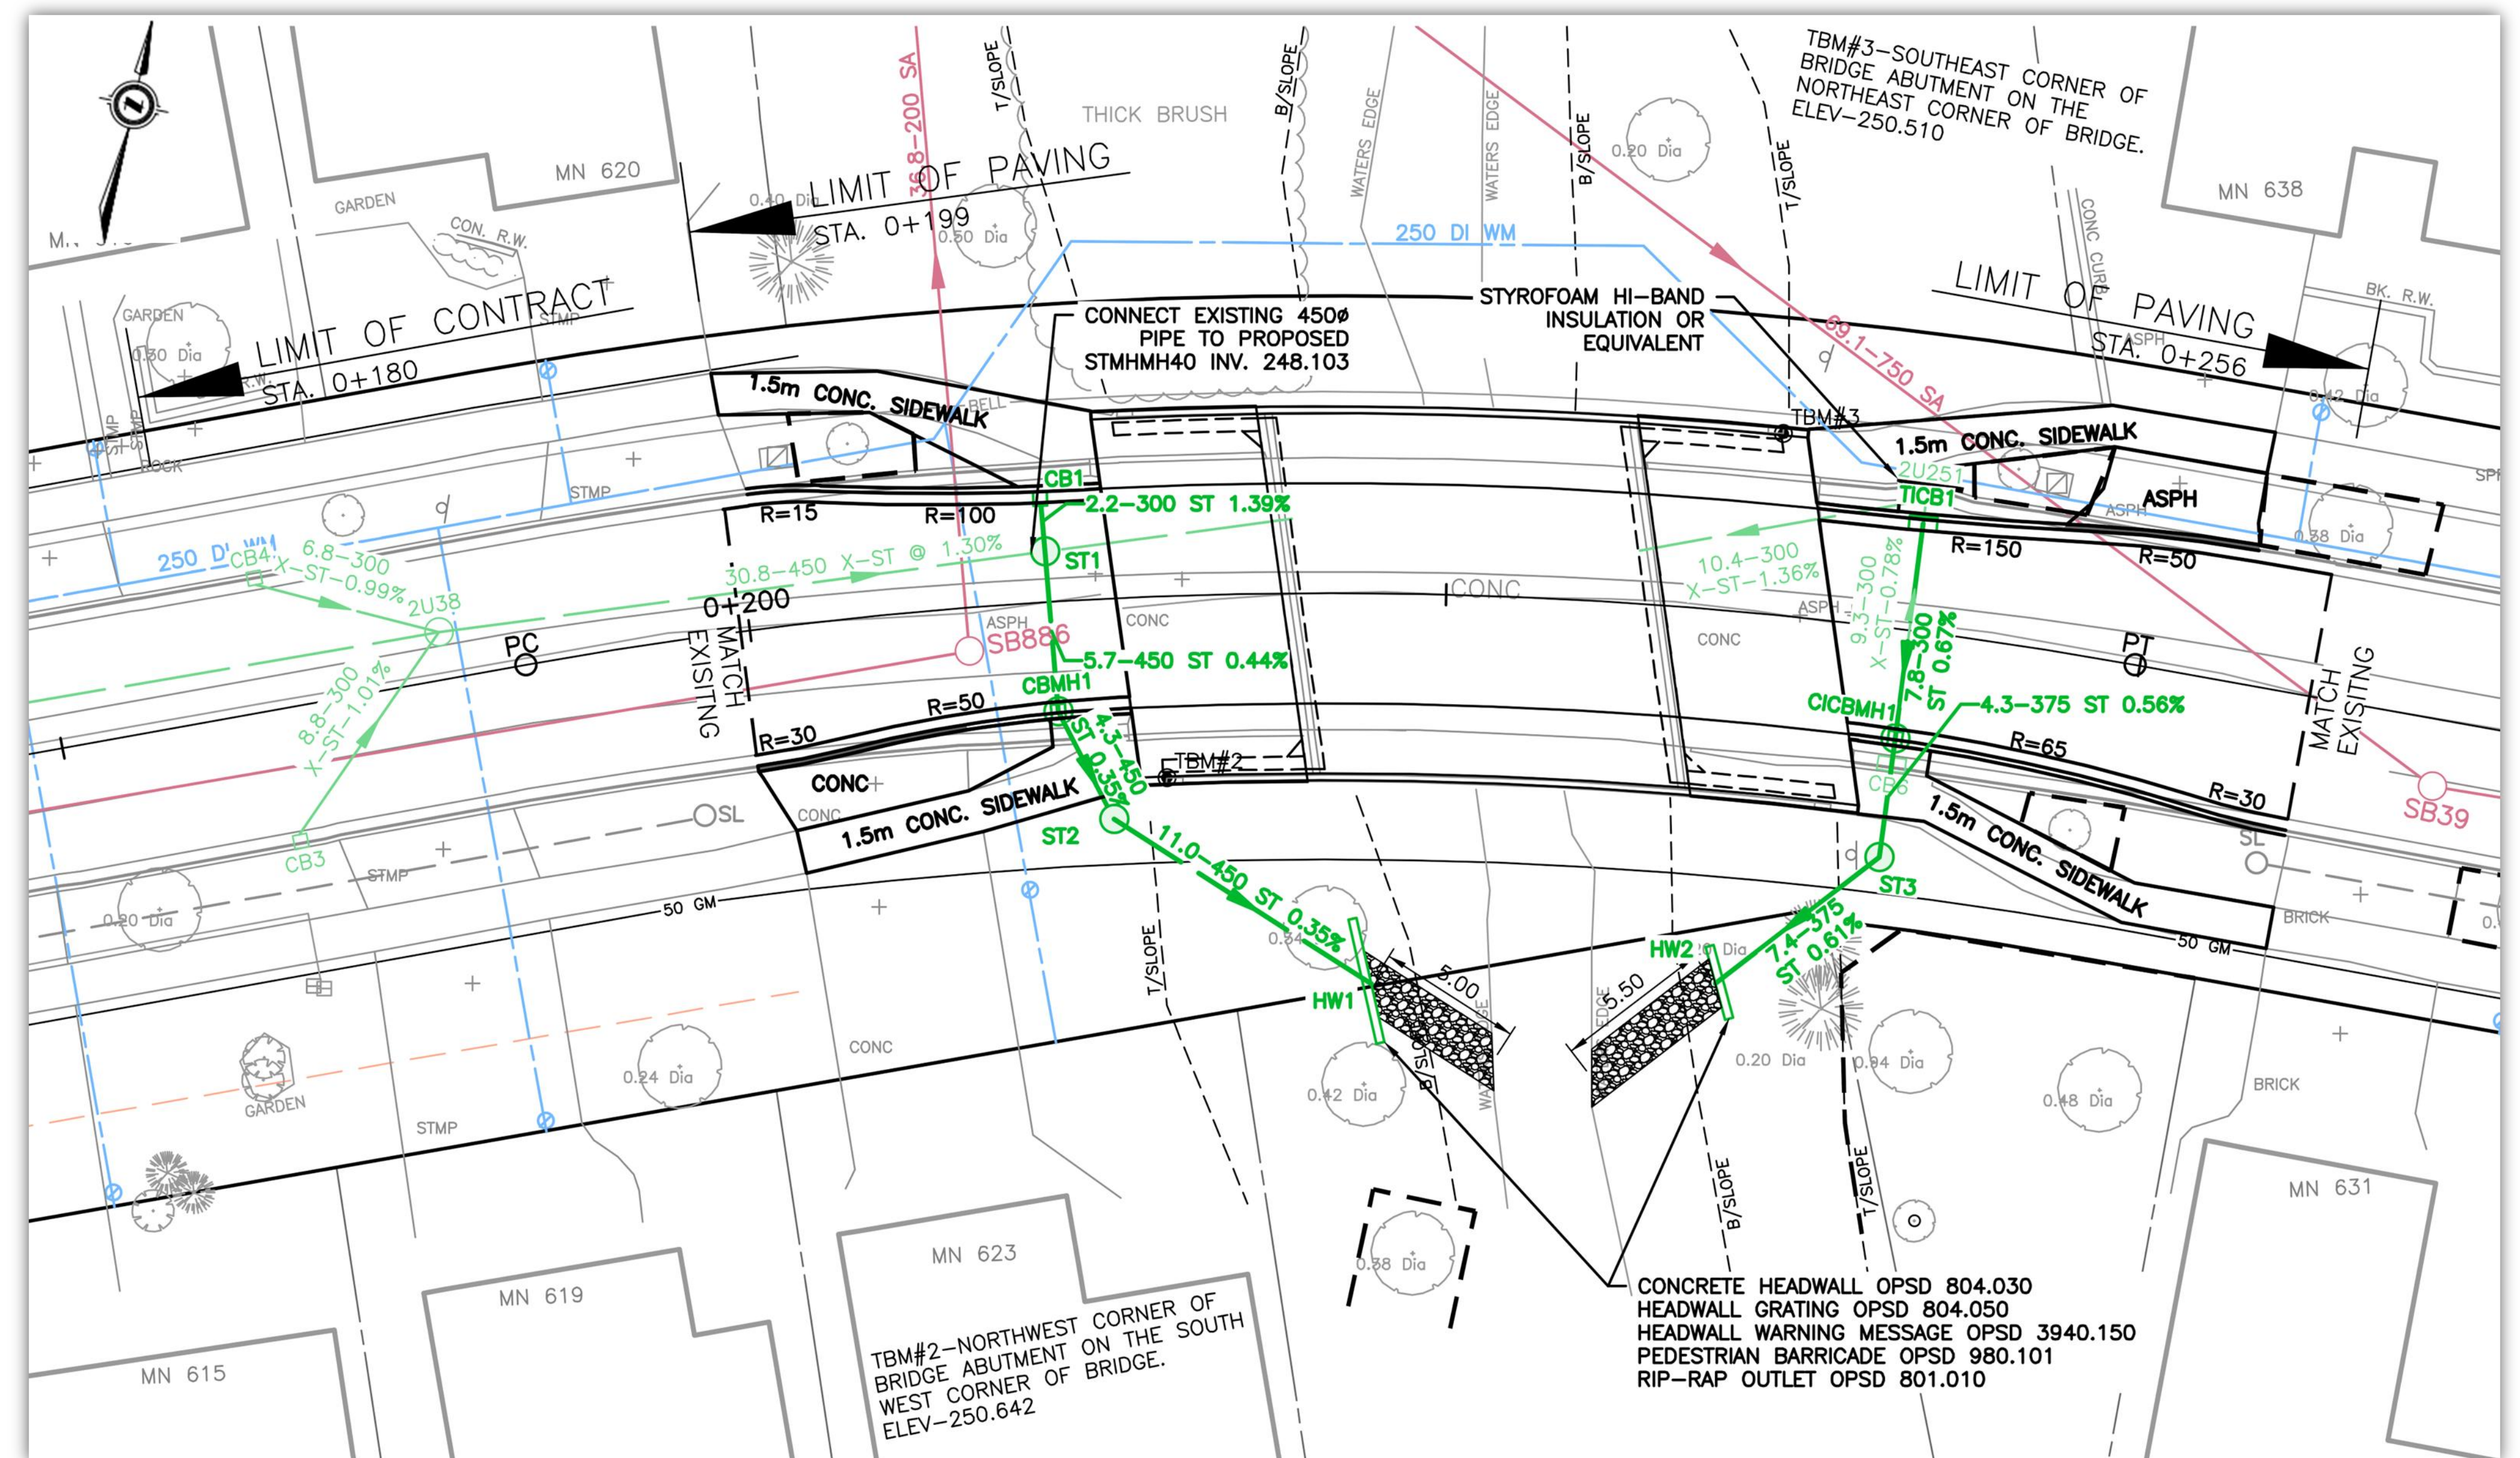

Bridge Renewal

- Remove and replace existing superstructure (upper portion of bridge)
- Widen sidewalks
- Reconstruct the top of the abutments (support walls)
- Remove existing deck drains
- Partially remove and reconstruct wingwalls (side walls)
- Construct new approach slabs (road before the bridge)

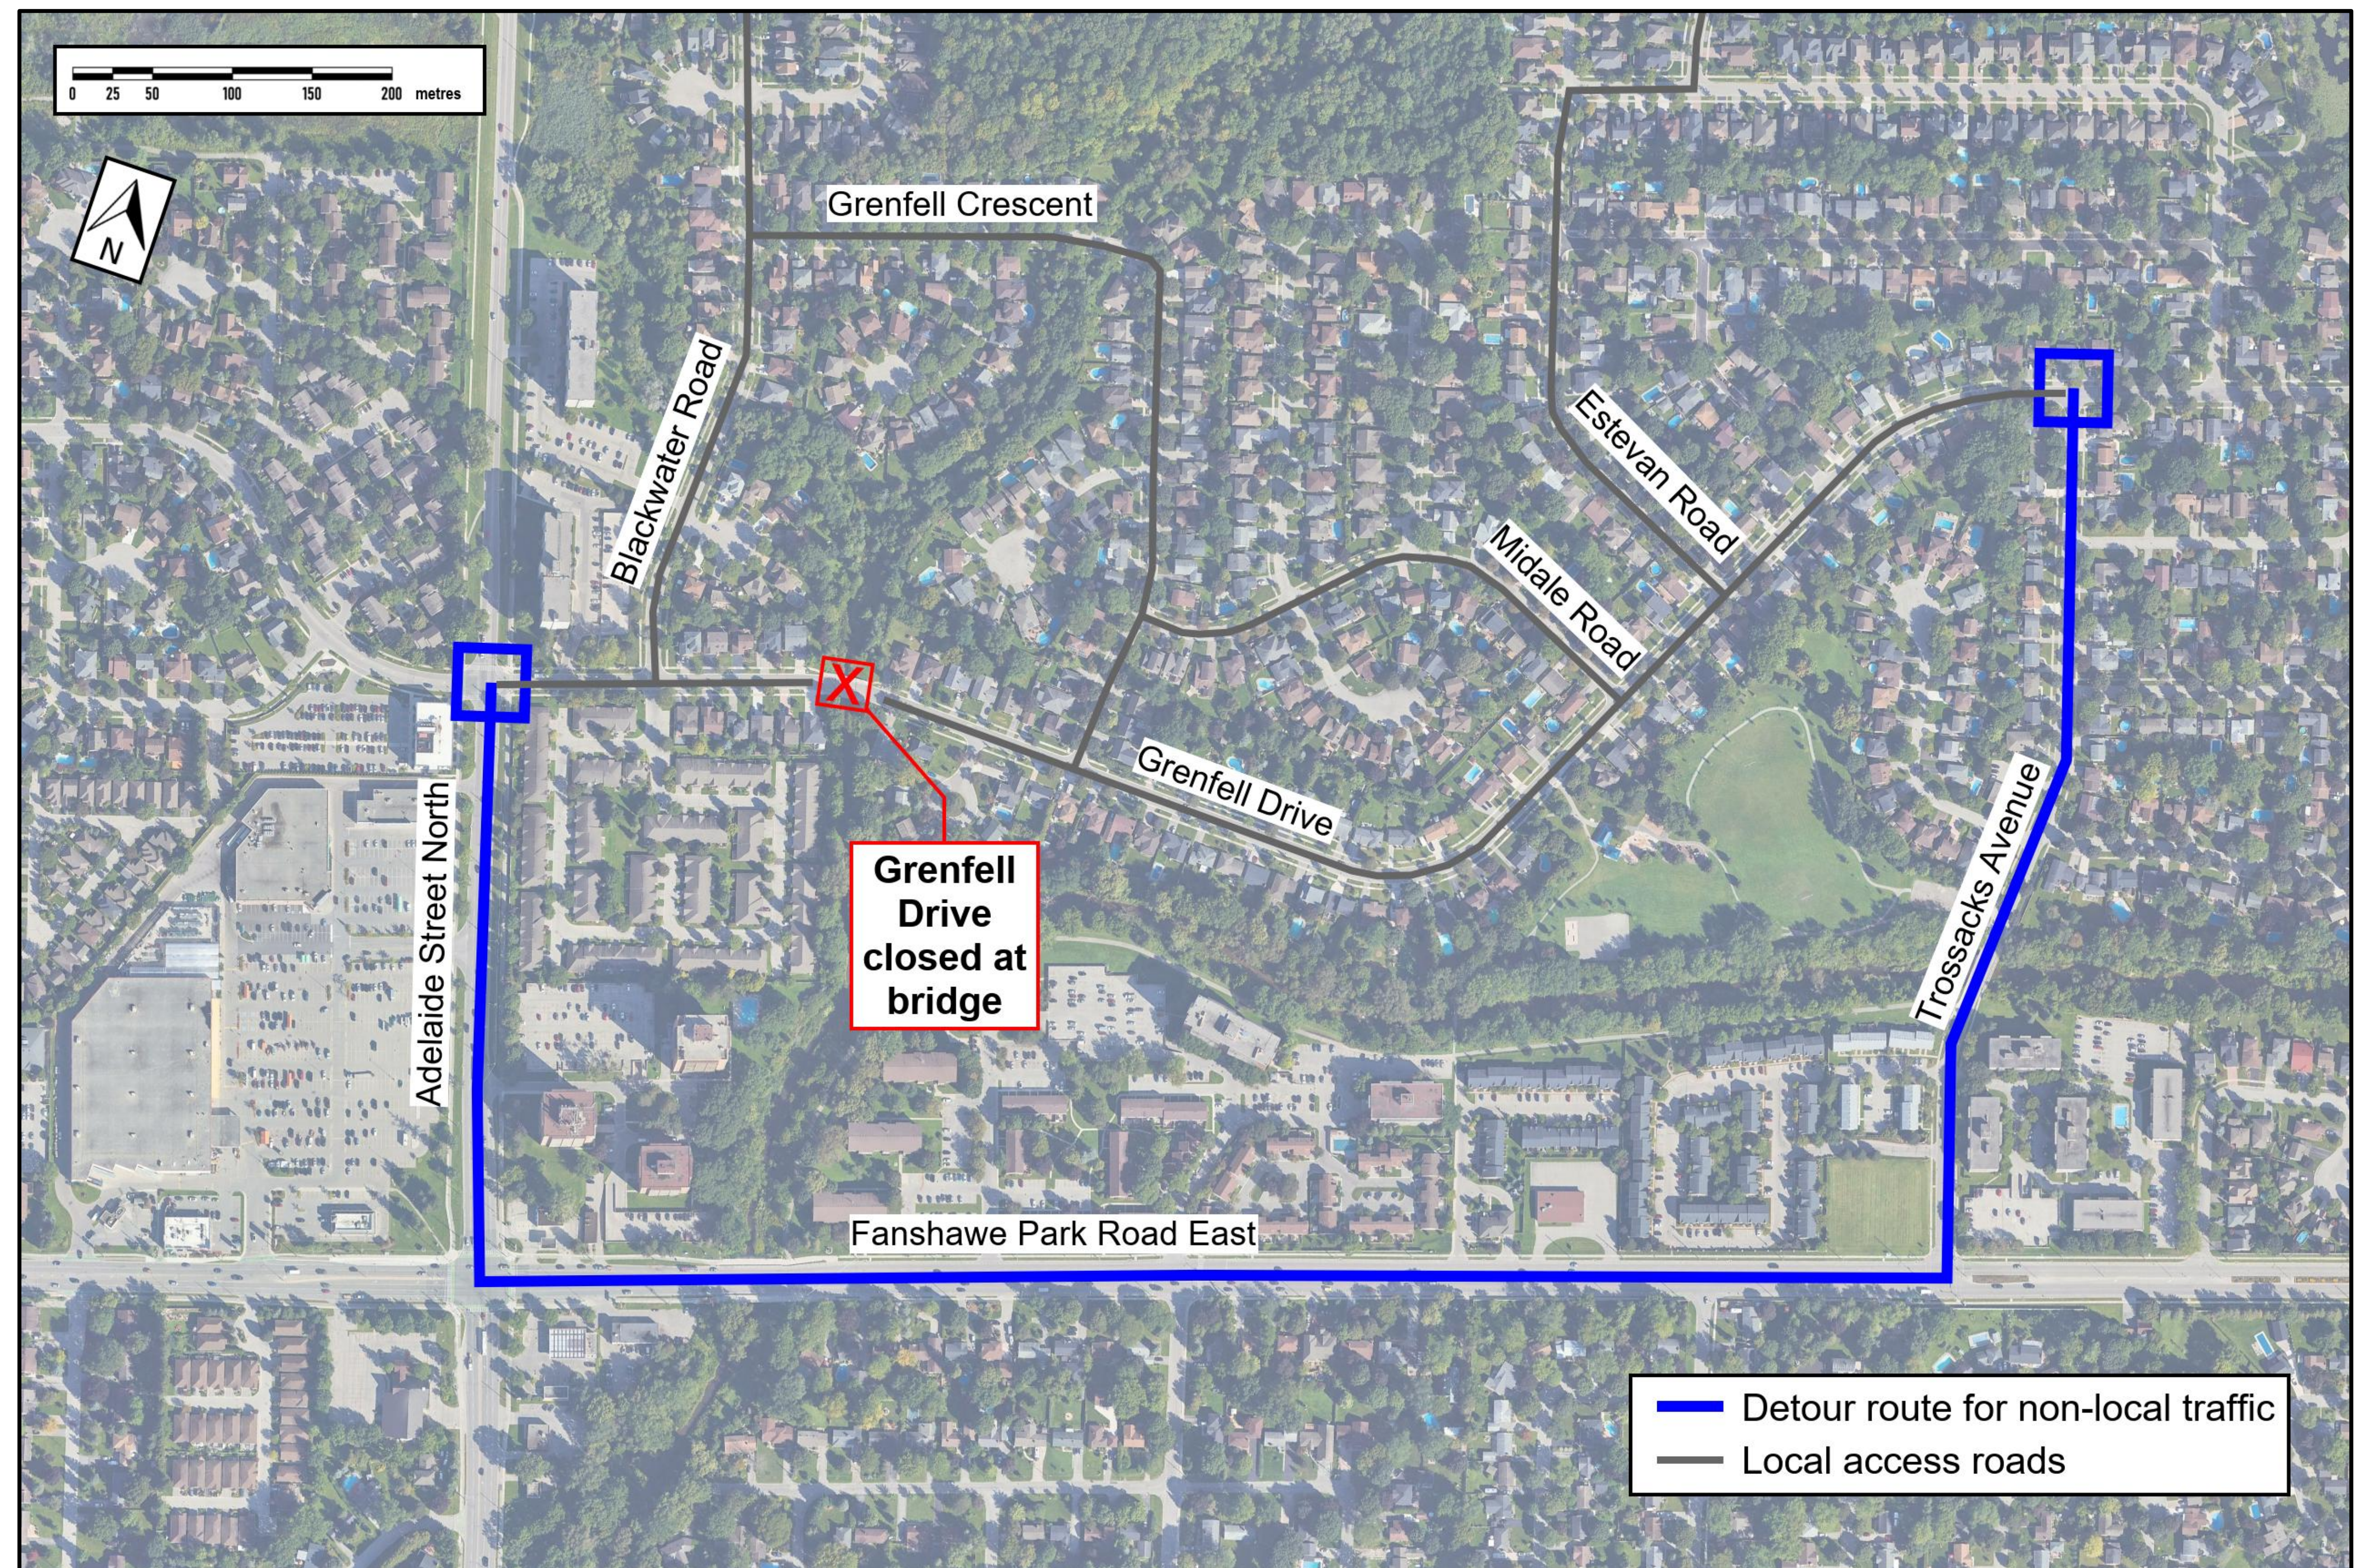

Associated Municipal Works

- Relocate existing storm sewers that currently run through the east and west abutments (support walls)
 - Outlets will be relocated south, downstream of the Grenfell Drive Bridge outlet structures or spillways
- Construct new curb and sidewalks to match with existing
- Replace asphalt at the bridge
- Restore disturbed areas

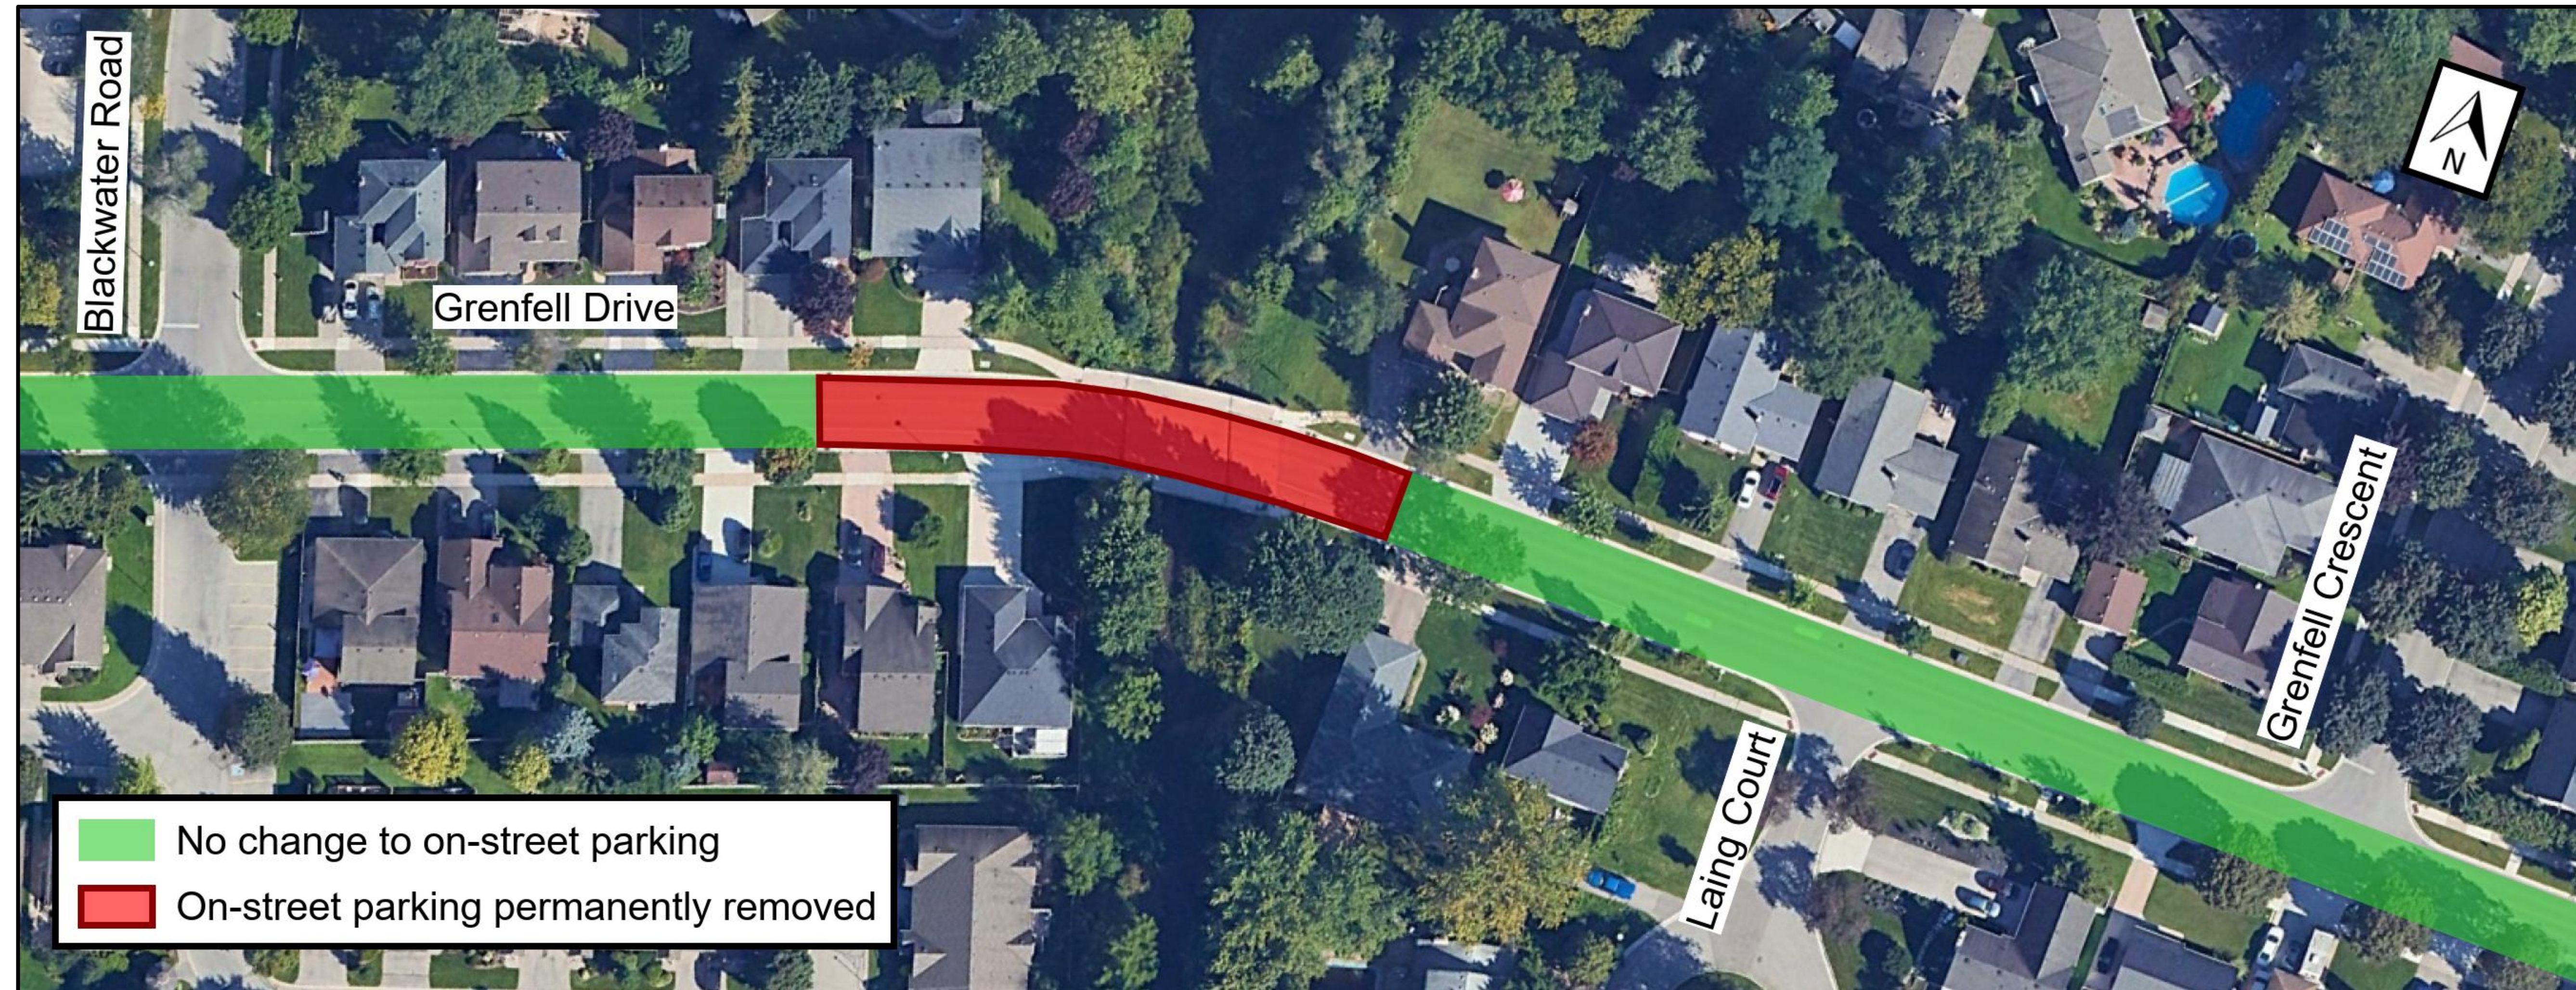

Detour Plan

- The detour route will be identified with signage
- There will be no pedestrian access across the Grenfell Drive Bridge during construction

Impacts to On-Street Parking

- On-street parking will be permanently removed in some areas to accommodate wider sidewalks across the bridge
- On-street parking may also be temporarily affected during construction for equipment and operations

Construction Timelines

Activity	Anticipated Timing
Contract tendering to select construction contractor	Fall 2026
Advanced works including tree removals and utility relocations	Late 2026 to early 2027
Bridge closure and rehabilitation	March to December 2027

Construction updates will be provided on the Get Involved webpage:
