

Oxford Street West Sanitary Replacement

Public Update Meeting

April 29th, 2026, 4:00pm - 6:00pm

London Public Library, Cherryhill Branch, 301 Oxford Street West.

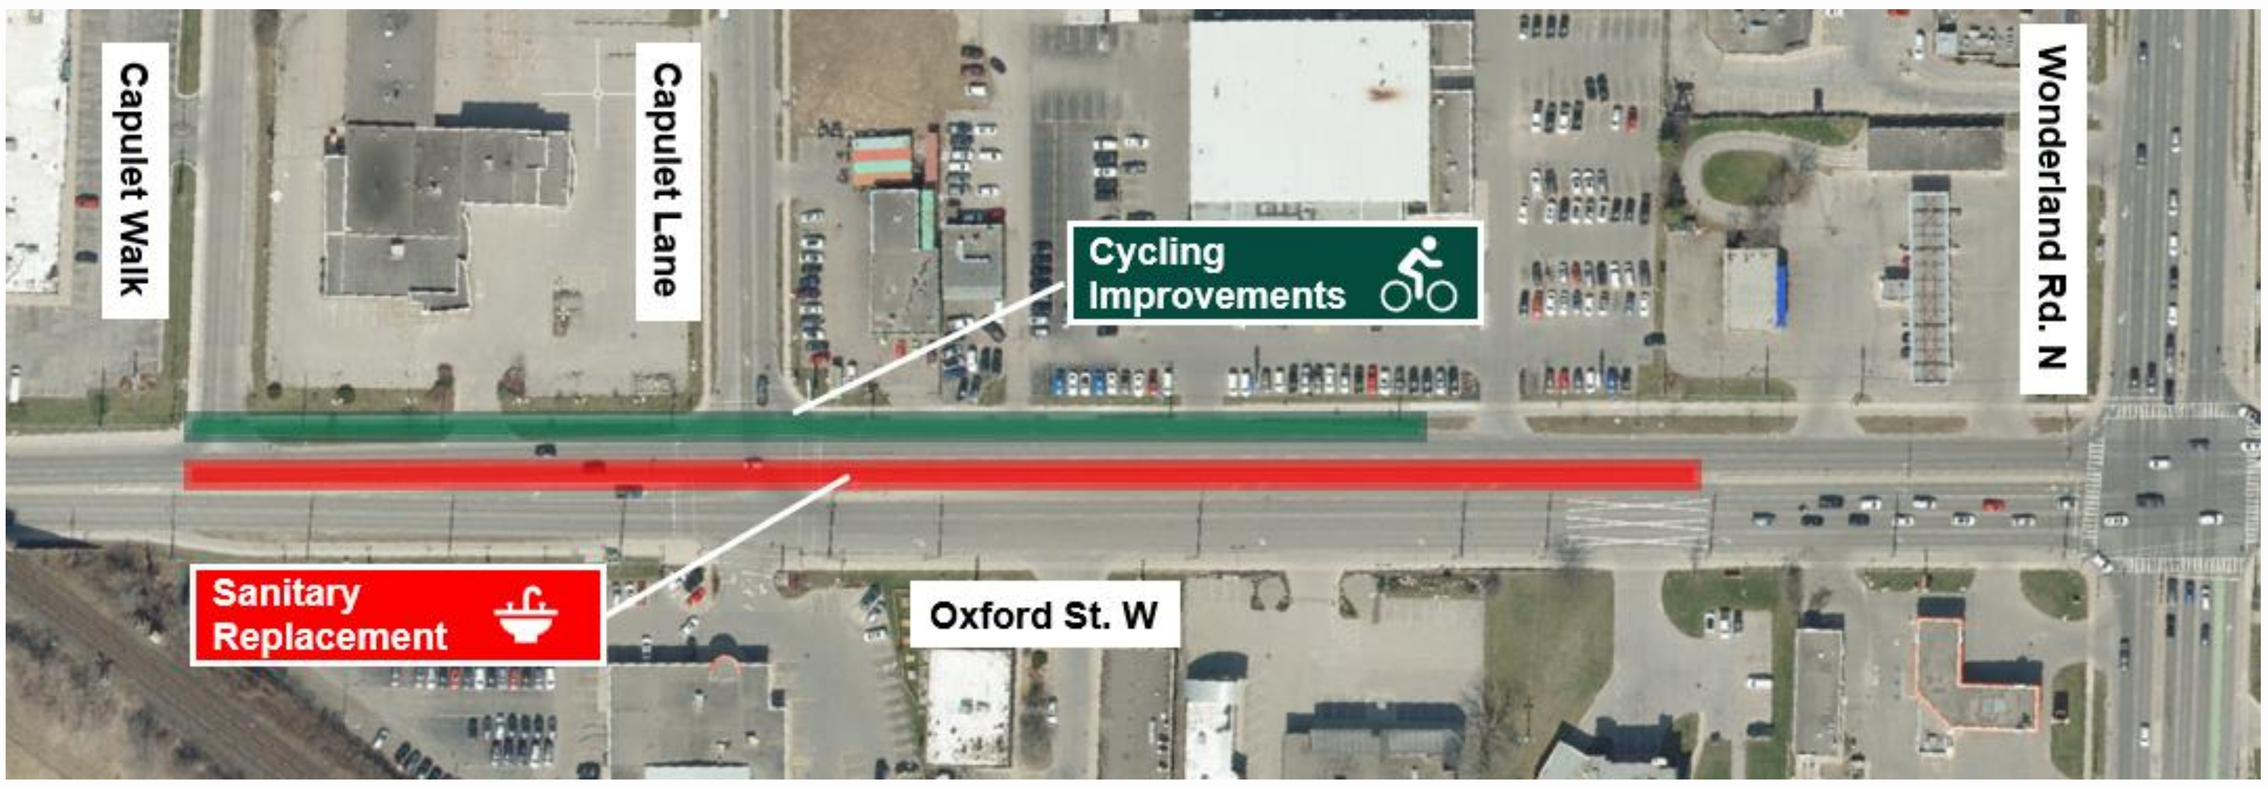

ARCADIS

Connecting our future

London
CANADA

Project Scope & Limits

- The project limit is Oxford Street West from 10 meters west of Capulet Walk to 200 meters east of Capulet Lane (~315m).
- The existing sanitary sewer is being upsized to support future development and growth.
- The City is adding a cycle track within the north boulevard to address a key gap in our cycling network.

Project Timelines

We are here

Project Initiation	Preliminary Design	Detailed Design	Construction
Summer 2025	Winter 2025/2026	Spring 2026	Planned Summer 2026 to Spring 2027

Public & Stakeholder Consultation

Project Notice mailed to residents	Pre Construction Notice mailed to residents	Updates on City website	Public Update Meeting	Construction Notice emailed to residents
August 1, 2025	April 12, 2026	Ongoing	Today	2 weeks prior to construction

London CANADA

Our Objective

- Inform you about the final design and upcoming construction.
- Incorporate a complete streets approach to improve pedestrian crossings and bus stops.
- Provide comfortable mobility options to all modes of transportation that improve health and reduce noise and emissions.
- Ensure reliable sanitary services to homes and businesses, while supporting future growth.

Corridor Context: Existing Conditions

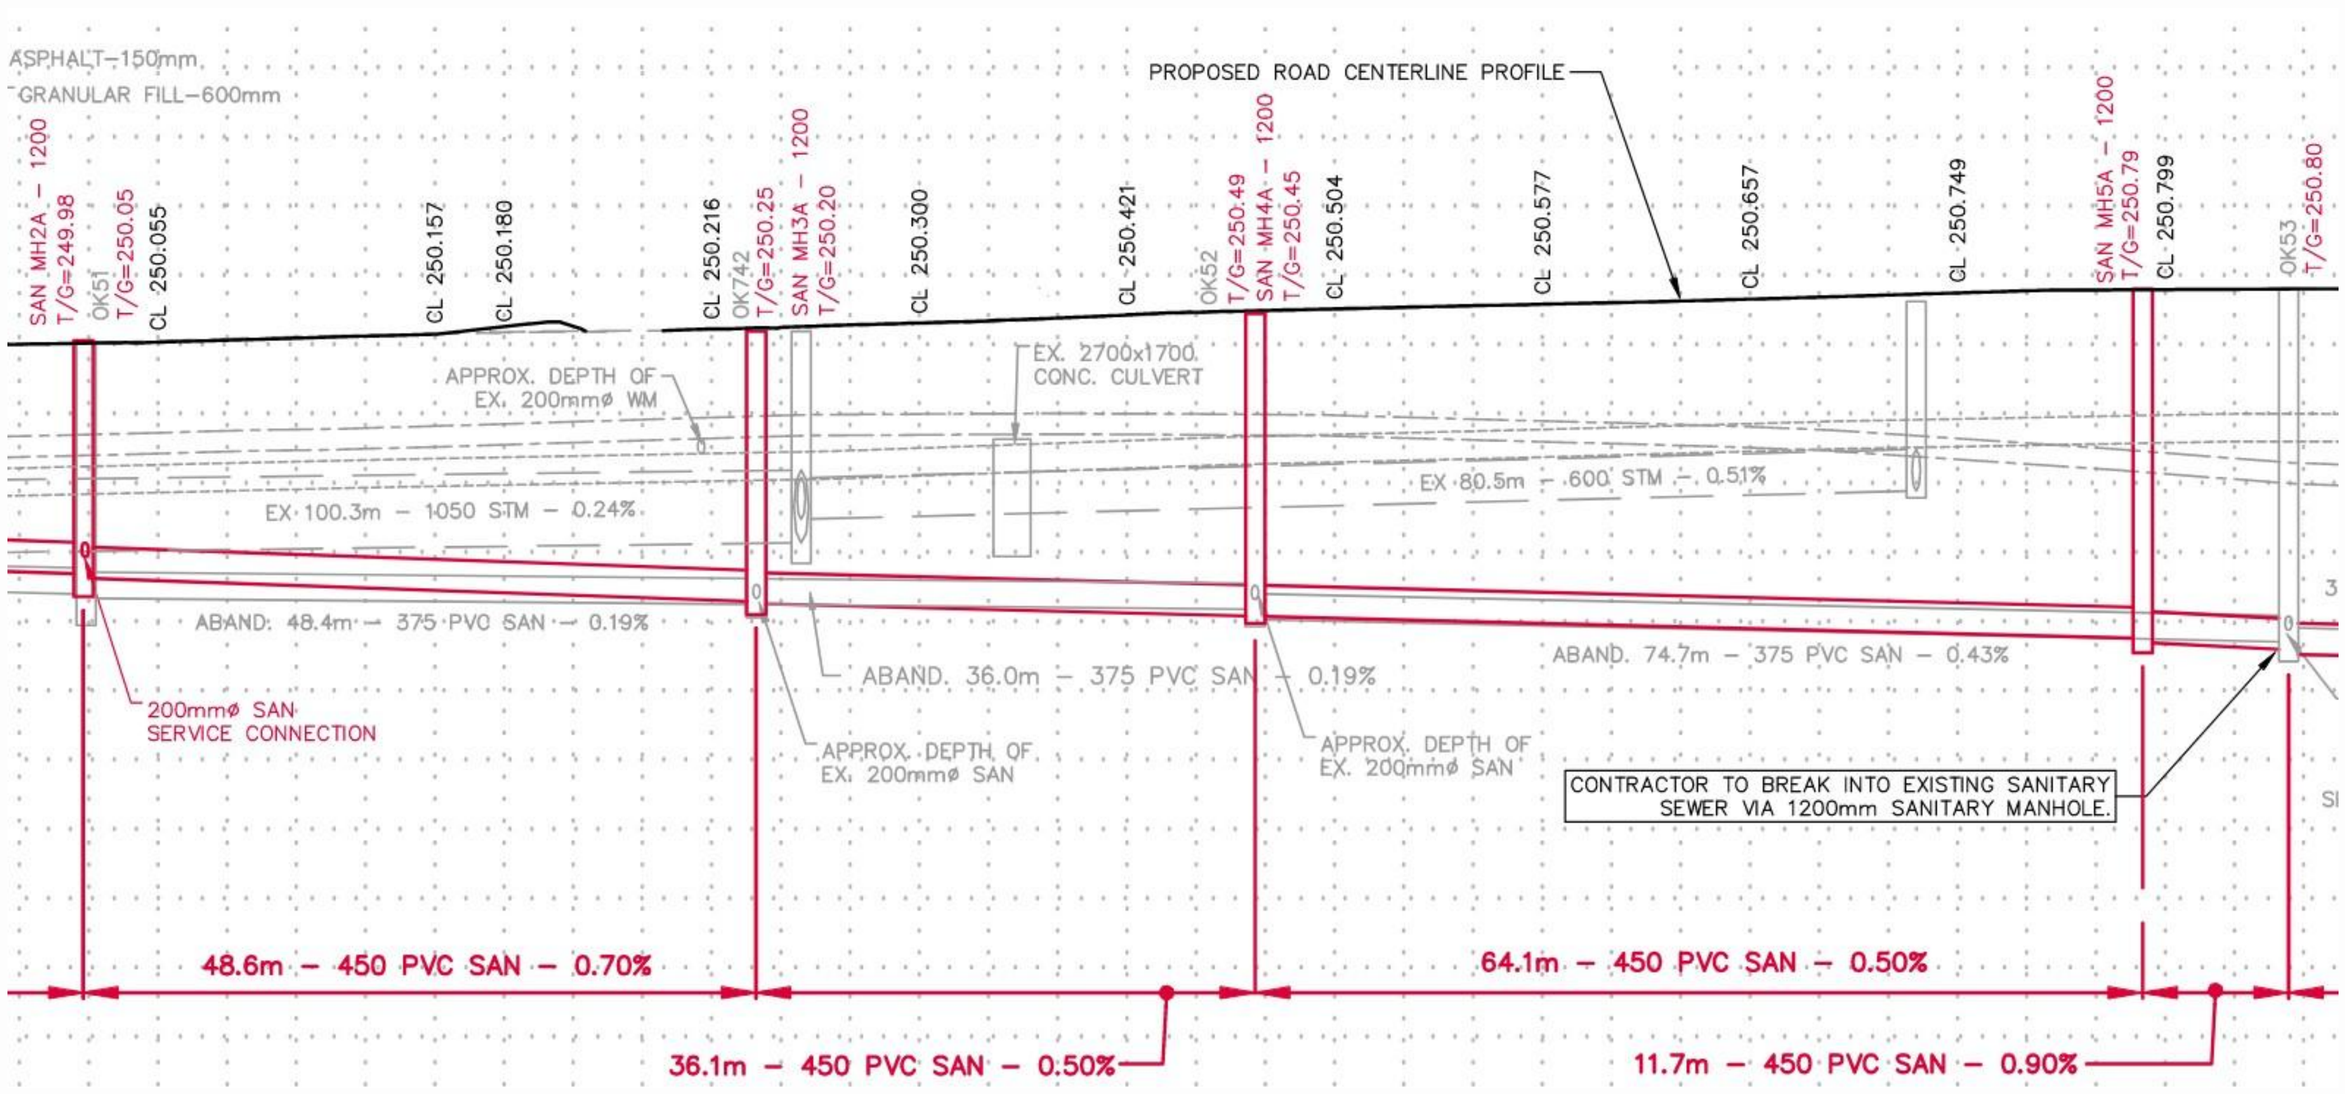

- **Street Type**: Rapid Transit Boulevard
- **Primary land uses**: Residential, Commercial, and Emergency Access
- **Key destinations**: Cancer Survivors Garden, Capulet Park, Fit4Less, Fleetway, Holy Family Parish/Notre Dame Elementary School, Huntington Park, North Mud Creek Park, Oakridge Pool/Arena, Or Shalom Cemetery, Restmount Cemetery, Riverside Boat Launch, Thornwood Park, West Alliance Church

Sanitary Sewer Improvements

- The City is seeing new development in the Oxford Street West area, which means we need to improve our sanitary sewer system to keep up.
- The current 350 mm sewer pipe between Capulet Walk and just east of Capulet Lane is too small for the growth we expect in the future. This section of sewer also has issues with its alignment and slope, making it harder for wastewater to flow properly.
- To fix this, we are building a new, larger 450 mm sanitary sewer in a better location. This will provide safer and more reliable sewer service for local homes and businesses, reduce the risk of backups, and help support future development in the area.

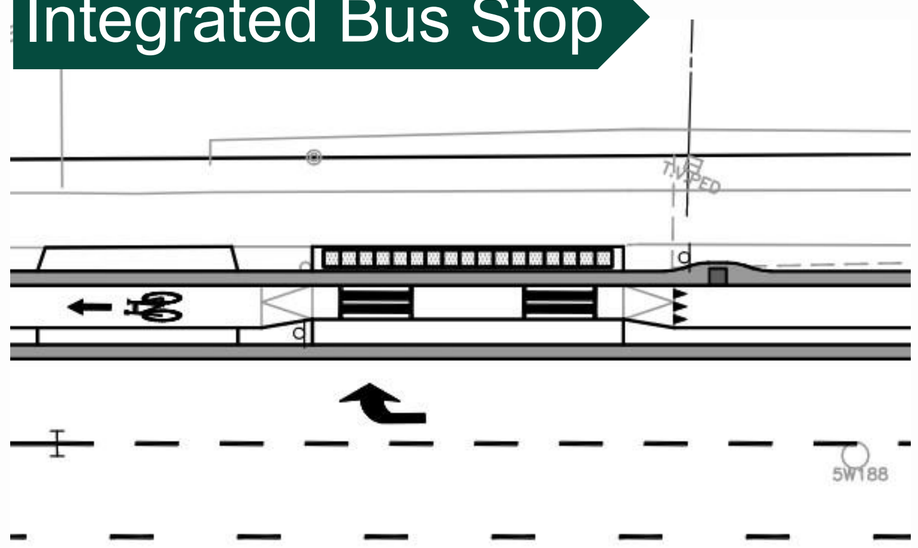

How the Sewer Sits Underground

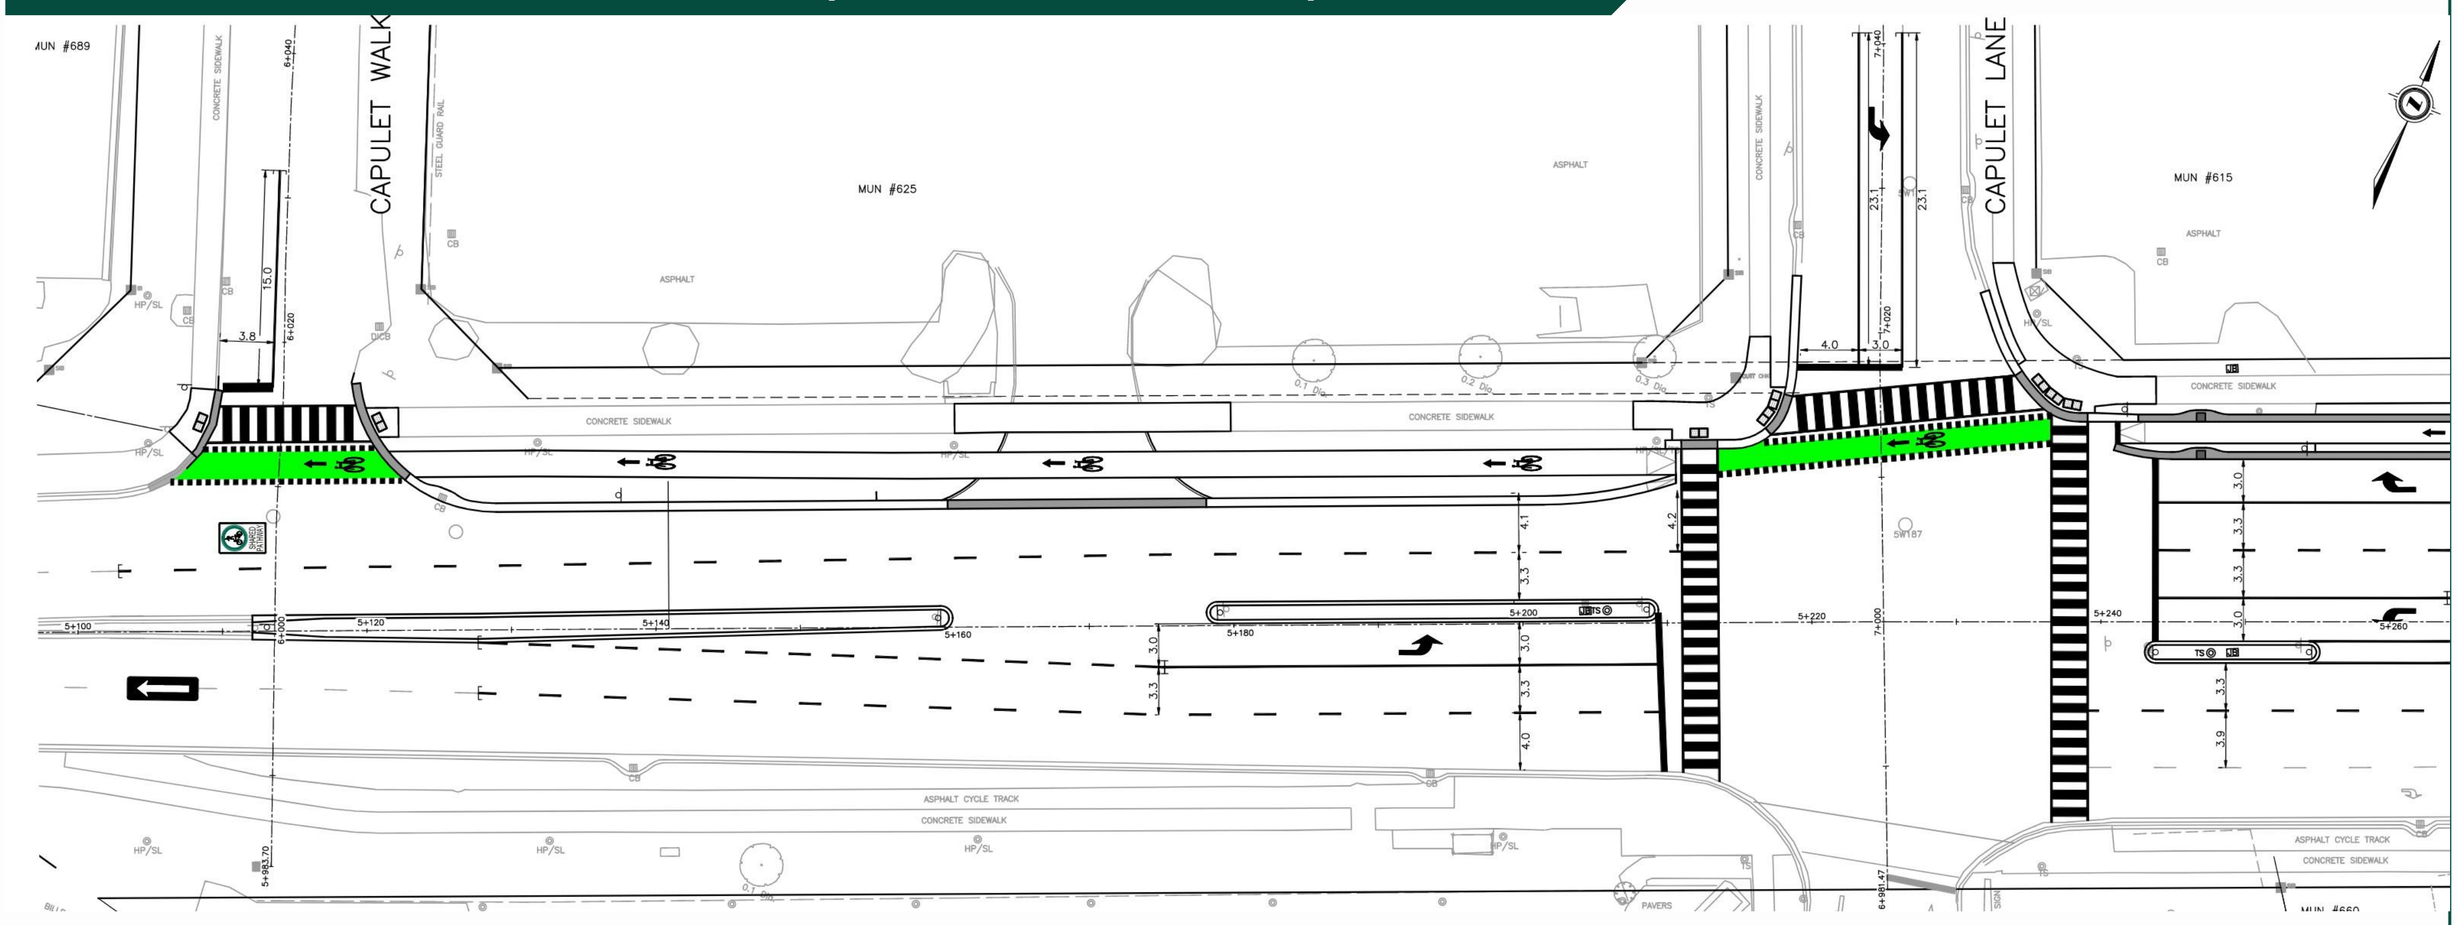

Transportation Improvements

- Since the project is replacing the existing sanitary sewer and associated medians, the City took the opportunity to improve the overall layout for drivers, cyclists, pedestrians and all other modes of transportation.
- We were able to help eliminate existing deficiencies and improve lane alignment, sightlines, crosswalks, driveway entrances, and bus stop configurations.
- These upgrades create a more comfortable, safe, and reliable corridor for everyone, improving how we all get around and connect across the city.

Integrated Bus Stop

Oxford Street West from Capulet Walk to Capulet Lane

Cycling and Signal Upgrades

Cycle Track

Addressing a key gap in our cycling network by proposing a one-way cycle track on the north boulevard.

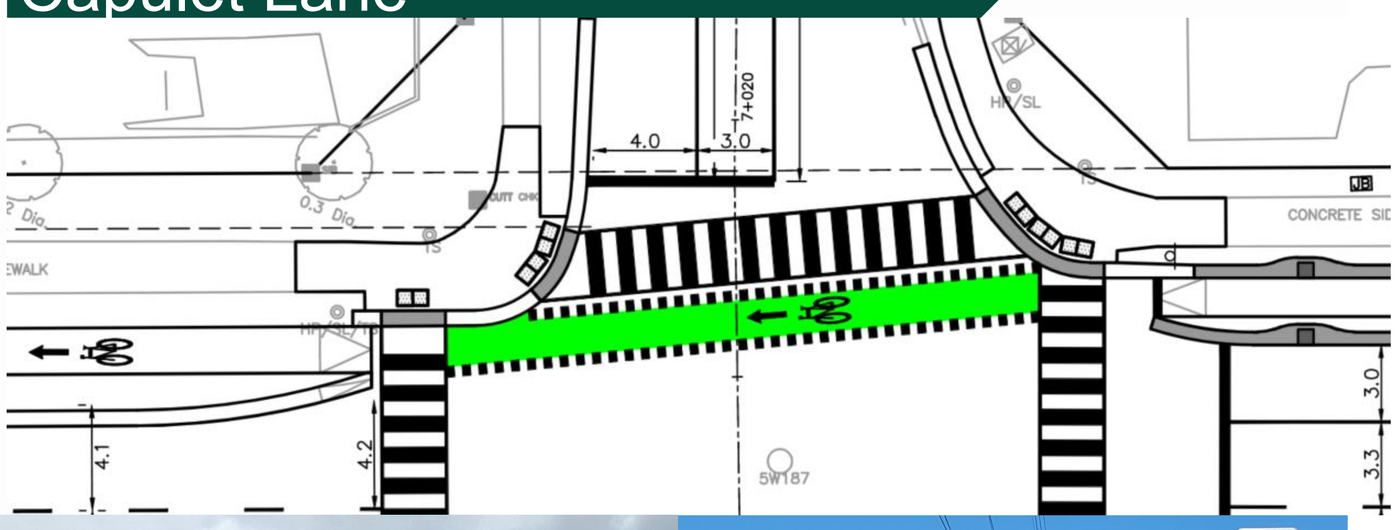

Cycle tracks are cycling facilities that allow cyclists to be separated from both the roadway and the sidewalk.

Providing opportunities for connections to other areas of the City and Key destinations.

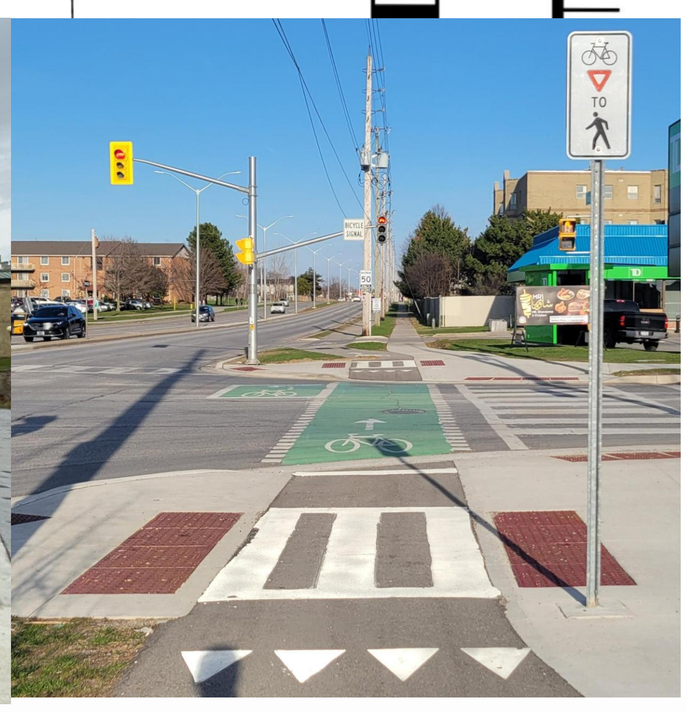

Signal Upgrades

We’re installing new bicycle traffic signals to help people biking move safely and efficiently through intersections.

Cycle Track at Oxford St. W and Capulet Lane

Construction Staging

Stage 1 of Construction, Looking East

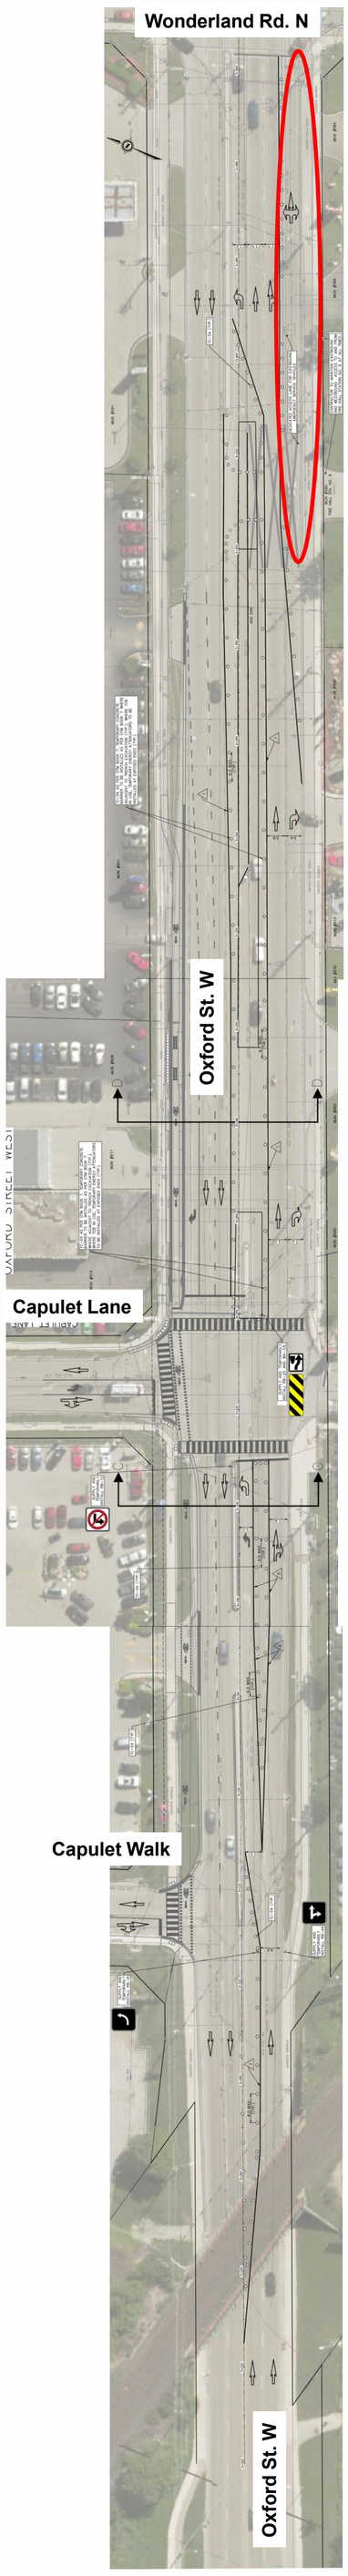

- Stage 1 will occupy approximately 80% of the total time to complete construction.
- Targeting completion of this stage by mid November.
- We will maintain traffic with minimal lane disruptions.
- Access to homes, businesses, sanitary, and emergency services will be maintained throughout.

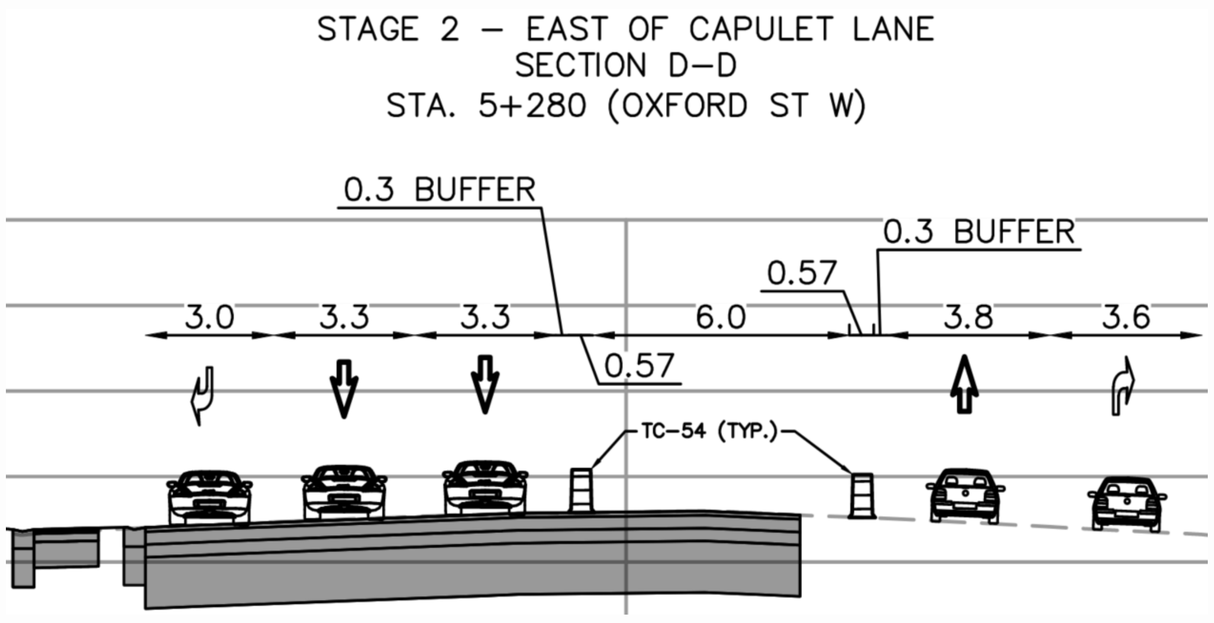

- Firehall No. 6 will have their own designated lane as shown circled in red.
- There won't be access to Capulet Walk from Oxford St. W. Instead, traffic will need to follow the designated detour route shown on Board 11.
- Left turns onto Capulet Lane from Oxford St. W heading East won't be permitted.
- Left turns into the Honda Dealership from Oxford St. W heading West won't be permitted.

Construction Staging

Stage 2 of Construction, Looking East

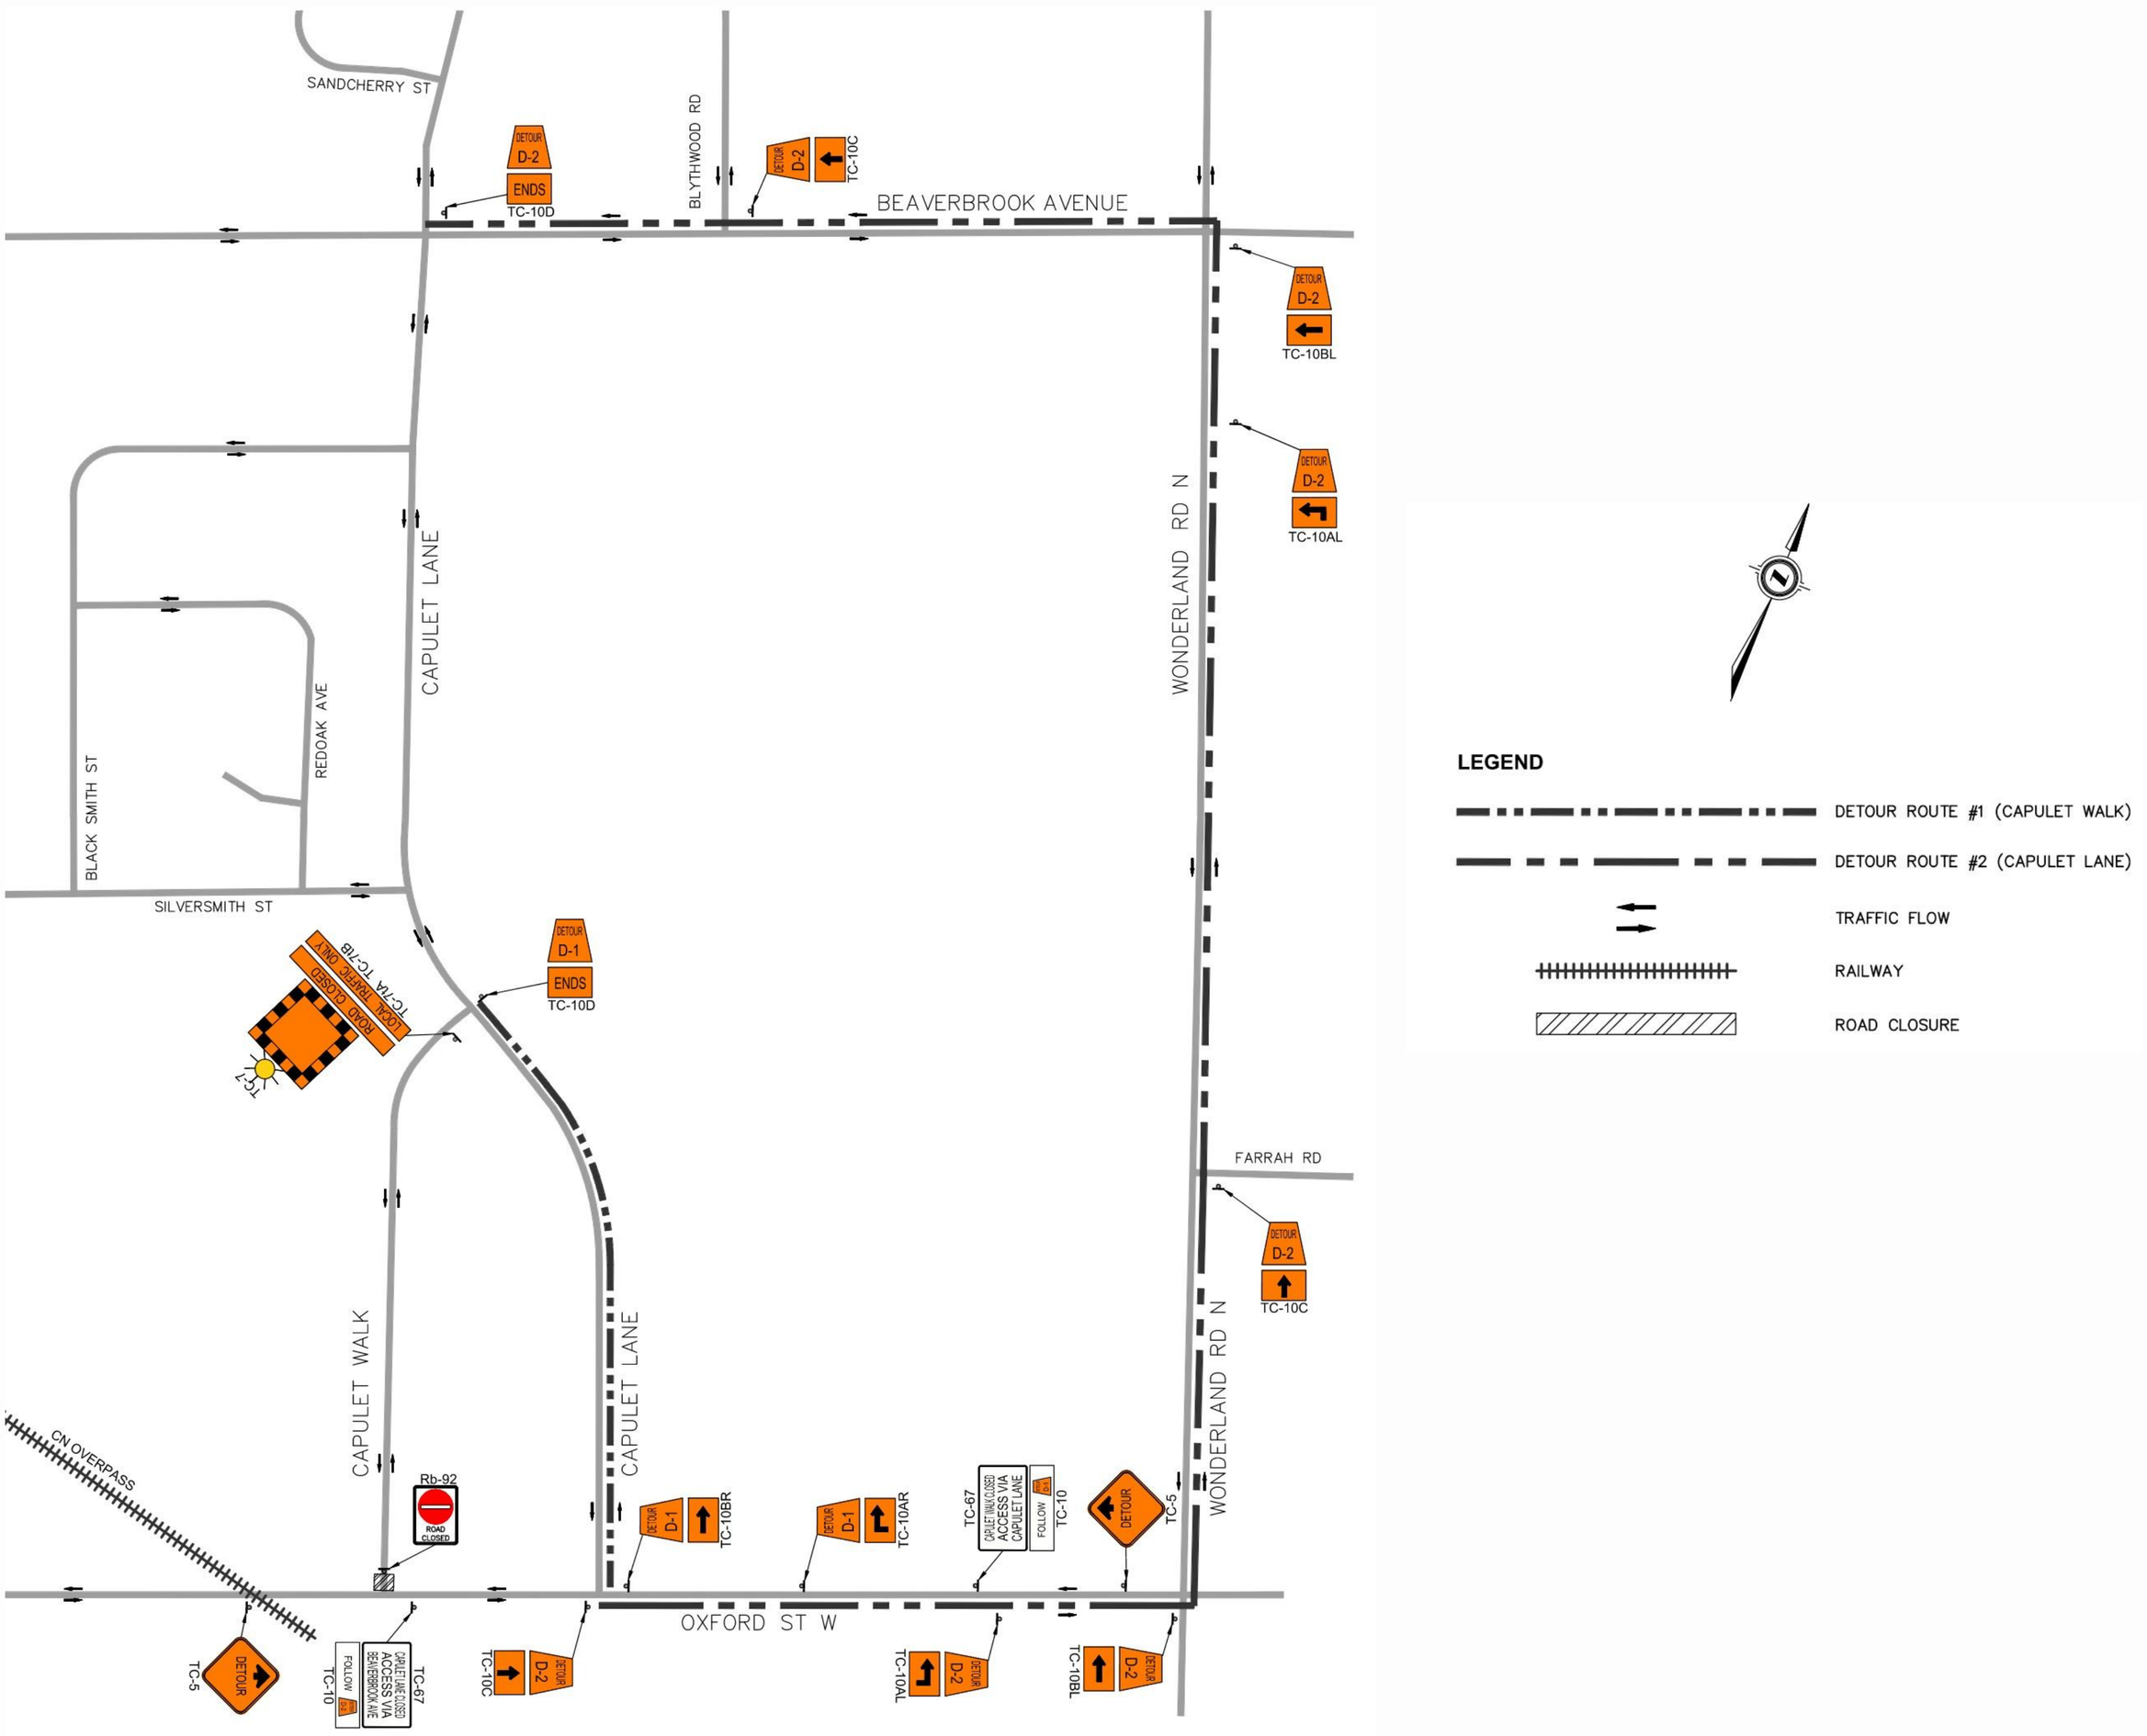

- Stage 2 will occupy approximately 20% of the total time to complete construction.
- The City is targeting completion of this stage by mid December.
- This Stage will have improved access compared to Stage 1.

- Firehall No. 6 will still have their own lane.
- Access to Capulet Walk will be reinstated.
- Left turns onto Capulet Lane from Oxford St W heading east are now permitted.
- Left turns into the Honda Dealership are still not permitted.

Detour Routes

- Since Capulet Walk will have no access during Stage 1. We are introducing clearly marked detour routes to help travelers reach Capulet Walk safely and conveniently.
- To support the detour and ongoing construction, some bus stops will be moved slightly. Signage will be in place to guide transit users to the new locations.
- These detour plans are designed to ensure everyone can still get where they need to go, safely and with minimal inconvenience.

Next Steps

Continue to provide your input online at:

getinvolved.london.ca/oxford-street-sanitary-sewer

After this meeting, we will:

- Review the comments and suggestions from the public
- Finalize detailed design plans in the upcoming month
- Confirm construction timelines (City of London to provide further construction details ahead of construction)

Stay Connected:

- Visit the project website for project updates and information:
