about the plan.**

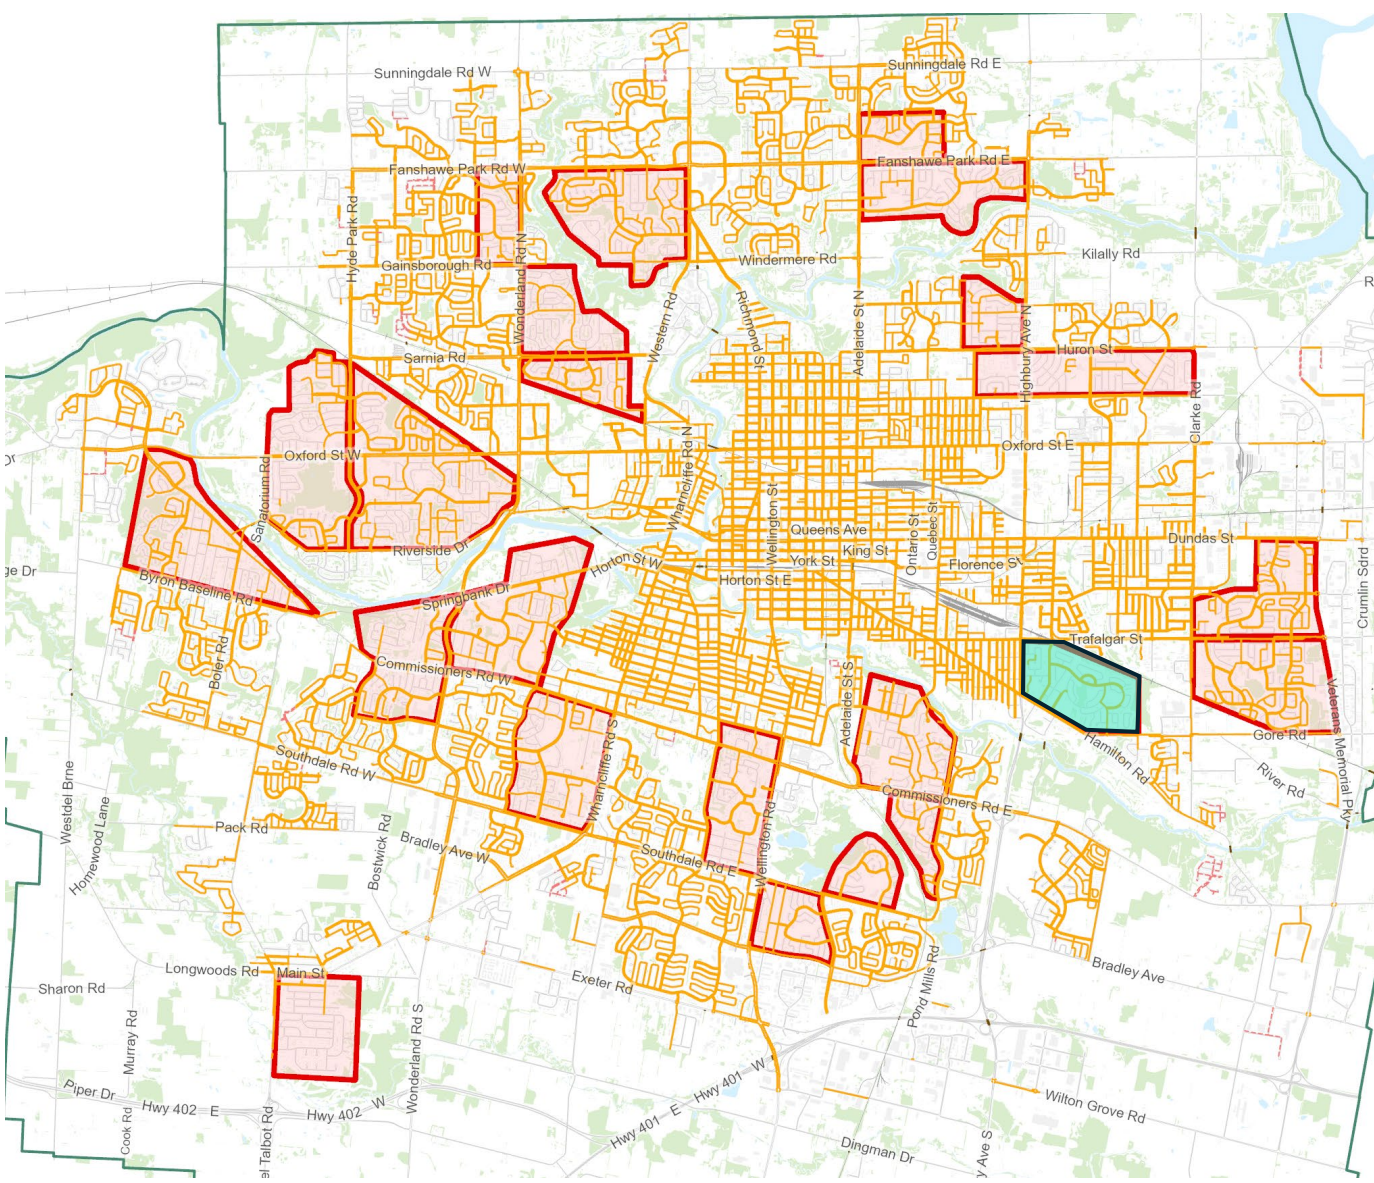

What is a Neighbourhood Connectivity Plan?

A Neighbourhood Connectivity Plan identifies with the community where new sidewalks and pedestrian crossings can provide the most value in the future.

Our approach will consider the whole community and recommend sidewalks where they will provide the greatest benefit.

With your comments and feedback, we can get a better sense of your travel patterns and mobility needs to help us determine where sidewalks should be added in a way that makes the whole area better connected.

Above: A map of neighbourhoods without sidewalks. Highlighted in blue is the Hamilton Road and Fairmont Area east of Highbury Avenue.

The process to develop the plan

Creating the plan

Your feedback will help us understand your community's priorities around accessibility, connectivity and pedestrian infrastructure.

Specifically, your input will help us:

- Identify important community amenities, destinations and features
- Understand how you use your neighbourhood now – and how you want to use it

How to comment

- Complete a **feedback form** and leave it with City staff.
- Share feedback on **the project webpage** by submitting comments or identifying locations on the interactive map online.
- Contact **nep@london.ca** to share comments.
- To stay informed about the plan's development and recommendations, please **subscribe for email updates** on the project's webpage to follow along with the project.

The Hamilton Road and Fairmont area

City Council has directed staff to develop a Neighbourhood Connectivity Plan for **the Hamilton Road and Fairmont area east of Highbury Avenue.**

The plan will identify where new sidewalks and pedestrian crossings can provide the most value – and we are seeking your input.
